

Kyle Glaws

Individual Contribution Report

I programmed mostly the backend of this project, although I did write a fair amount of the app itself as well. Sebastian wrote the camera recording, video playback, and video streaming functionalities, while I handled user authentication, video uploading, client-server interaction stuff etc.

- SplashScreenActivity
- ChooseLoginRegistrationActivity
- RegistrationActivity
- LoginActivity
- VideoUploadTask
- Flask Backend
- Original PHP backend
- MySQL database

I felt that we both contributed an equal amount of work. I am very happy with the way this project went. I think we both learned from each other and worked together very well.
