Software Capstone

<div align="center">Individual Capstone Report</div>

I primarily worked on the frontend of the app and the core features. I will list the classes I coded, which also have their corresponding XML layouts. In addition, I also fine tuned all layouts, designed the UI, handled the animations, and made edits to some of the classes Kyle worked on, such as the login/registration. All of these edits can be traced with my commits on GitHub. Here are the classes I coded:

CameraFragment

GetRequest

HomeFragment

MainActivity

Profile

TabsView

Video

VideoAdapter

VideoPlayer

Of course, these classes have their layout files which I also created. Kyle primarily worked on the backend and user registration/login.

Overall, I felt the work involved was completely equal between both parties. The code we worked on wasn't exclusive, we both helped each other out. We each put in equal effort and evenly split the workload.
